iCollab Google Map

a collaborative Google Map linking student projects
hosted on the web with their original context via geolocation

ACTIVITY 1. Add yourself to the iCollab Google map

1. Check your NUIG email for a message with link to iCollab Google map *(if you have not received this, please email me & I will send you a link)*.

2. Open the map & click "Save to My Places" so you can return to the map easily.

3. Check the academic staff & students who've already added themselves to the map – click links to get more information about each person.

4. Now you can create Points of Interest (POIs). Begin with your **profile POI**:

   a) Zoom in to NUI Galway & click **Edit**

   b) Click the blue placemark icon

   c) Move the cursor to the appropriate location (if you want to dismiss this placemark, press Escape)

   d) Click to place your placemark – it should bounce into place

   e) Change the placemark to a person/profile icon (not a blue bubble)

   f) Add your information:
      - **Title** = your name
      - **Description** = information about you including a brief bio (include #ct231 & your degree name) and links to your work/social media that you'd like to share, e.g. Twitter name, blog, photos, video, etc.
      - **Important**! Use the Rich Text Editor or HTML editor to hyperlink all links so that people viewing your profile can click through to them.

5. Click **OK** to save when you are finished.

6. To edit information on a POI, select the POI by finding it on the map or on the list in the left window and then click the **Edit** button. Change/add information and **Save**.

7. You can create other POIs on the map that point to web-based content/presentations in context (e.g. images, audio, videos, etc.).

ACTIVITY 2. Create a mobile augmented reality world using Wikitude

Follow the instructions in this iCollab blog post:
